Summary

- Recent **B.Sc. Computer Science** graduate and skilled MERN Stack Developer.
- Proficient in **MongoDB, Express.js, React.js, Next.js, Node.js**, and frontend frameworks like **Bootstrap & TailwindCSS**.
- Experienced in building **RESTful APIs**, tested with **Postman**, and integrating **JWT authentication**.
- Hands-on with **CRUD operations, Responsive Design**, Deployment (**Vercel, Netlify, Render**), and Payment Integration (**Razorpay**).
- Passionate about clean code, **UI/UX** best practices

Projects

TwitBook — Full-Stack MERN Social Media Platform | [Link](#)

26/09/2025-22/10/2025

Built a production-ready social platform enabling users to create accounts, share posts and stories, follow other users, and chat in real-time. Developed using **MongoDB, Express.js, React.js, Node.js**, and enhanced with **Redux, TanStack Query, TailwindCSS**, and **shadcn UI** for a modern, performant interface. Implemented secure authentication with **Jsonwebtoken(JWT)**, along with robust **email, username, and password validation using Joi**. Integrated complete **RESTful API CRUD operations**, optimized data fetching, and added **real-time messaging with Socket.io**. Configured GitHub-powered **CI/CD pipelines** and deployed both client and server on **Render**. The project follows clean code principles, modular architecture, and scalable backend design.

Trendora — E-Commerce Fashion Platform | [Link](#)

30/10/2025-25/11/2025

Built a SaaS-style fashion e-commerce platform using the MERN stack, supporting two user roles: **Customer and Seller**. Implemented **JWT authentication with Joi-based validation** for secure name, email, and password verification. Developed **RESTful CRUD APIs** for products, categories, orders, and seller inventory management. Customers can **browse, add to cart, place orders, and pay via Cash on Delivery or Online Payment using Razorpay integration**. Sellers can **create accounts, upload and manage products, track sales, and control inventory** through a dedicated seller dashboard. Styled using **TailwindCSS**, managed state with **Redux + TanStack Query**, and optimized data fetching for performance. Implemented **CI/CD pipeline**, uploaded full codebase to GitHub, and deployed both client and server on **Render** for live production.
